

Renormalized pricing by neighborhood

What inventory is **asking** vs what comparable sales say it **should be** — and the adjustment, up or down. Each of the following pages is one neighborhood as a complete system: value, waterfront, build-vs-buy, leasing yield, market conditions and live opportunities.

Pricing model validated out-of-sample to $\pm 16\%$ median error. Figures are comp-based screening signals, not appraisals.

#	Neighborhood	Now asking \$/ft ²	Should-be \$/ft ²	Adjust	Action	Yield
